

Deployment through the Eyes of Adolescents: Implications for Support

Angela J. Huebner, Ph.D.

Associate Professor

Department of Human Development, Falls Church, VA 22043

ahuebner@vt.edu

*Presented at the "National Guard Professional Development: Family Program
Professional Development 2010"*

January 27, 2010 Orlando Florida

Setting the Context

- 55% of active military members are married
 - 43% of those have children (40% under age 5)
- About 1.5 million service members have spent time in Iraq
 - ~500,000 have served 2 tours
 - ~70,000 have served 3 tours
 - ~20,000 have been deployed 5+ times
- State of off-installation housing
- High utilization of National Guard and Reserve Service Members
- Availability of support services

Impact on Marriage

- Mixed findings:
 - Less relationship satisfaction (McClelland & Sutton, 2005)
 - More marital stability (Karney s& Crown, 2007)
 - Only ~50% of spouses of enlisted members felt they coped “well” during the most recent deployment (Orthner & Rose, 2006)
 - Of Nat’l Guard/Reserve, only about 34% said they felt well-prepared for the deployment (Caiber Associates, 2003)
 - Best predictor of positive coping and adjustment was a strong marriage

Impact on Children

- Increase in child maltreatment rates (mostly neglect) during departure to and return from military deployment (Gibbs et al., 2007)
- Children aged 3 years or older with a deployed parent have more negative behavioral symptoms compared to matched group without a deployed parent (Chartrand et al. 2008)
 - E.g. emotional reactivity, anxiousness/depression, somatic complaints and withdrawal; attention difficulties, aggression
 - Important study because it controlled for caregiver's stress and depressive symptoms

Impact on Children

- Increase in symptoms of uncertainty and loss, boundary ambiguity, symptoms of depression, changes in routines and relationship conflict among adolescents with deployed parents (Huebner et al. 2007)
- Higher levels of post-traumatic stress and elevated blood pressure among adolescents with parent deployed (Barnes, Davis & Treiber, 2007)
- Major source of stress seems to be adjusting and readjusting to new roles and responsibilities throughout the cycle of deployment (Mmari et al. 2009)

Impact on Children

- Home Caregivers for children of deployed parents reported higher levels of emotional and behavioral difficulty in children than did those in the general population (Chandra et al., 2008)
- Children from active duty component expressed more anxiety about home caregiver during deployment and more trouble with school work (Chandra et al. 2008)
- Children from reserve component families reported more trouble from interacting with peers and teachers (who didn't get their experience) and more difficulties with parent readjustment after deployment (Chandra et al. 2008)

What do we know?

- Our studies
 - 2004 Focus Groups
 - 14 focus groups; 107 youth, all Services
 - Access via NMFA
 - 2008 focus groups
 - 11 focus groups; 85 youth; National Guard/Reserve

Overview

- Our Studies
- The Model
- Setting the Context: Normative Development; Vulnerability & Resilience
- Deployment (A)
- Exploring Adjustment (X)
- Resources (B)
- Meaning of Experience (C)
- Implications

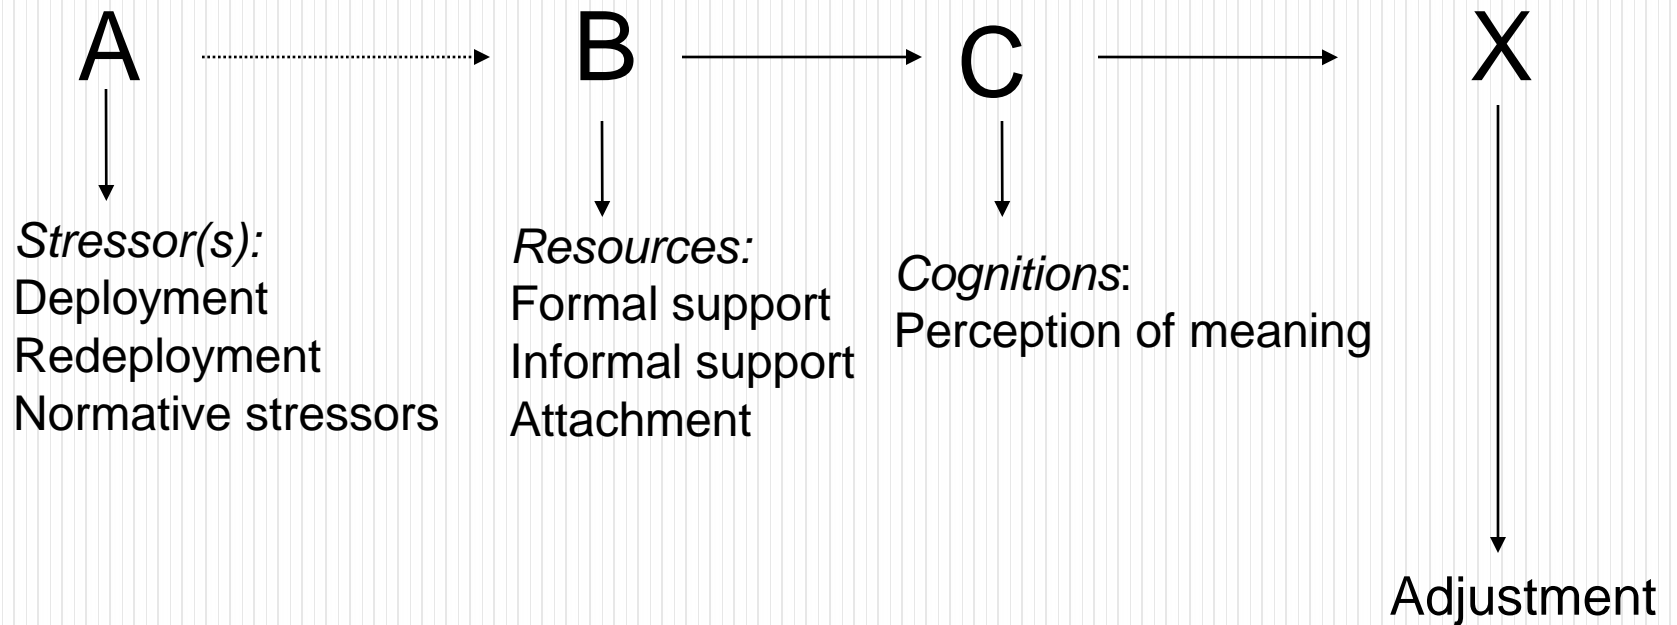

Study 1: Adolescent Adjustment During Parental Military Deployment

- 2004 Focus Groups
 - 14 focus groups; 107 youth, all Services
 - Access via NMFA
- Participants:
 - 107 adolescents between ages of 12 and 18
 - ~ 61% Caucasian; 17% African-American
 - ~ 46% Females
 - ~ 56% Active Duty military parent (39% Army)
 - ~ 36% National Guard or Reserve military parent (23% Guard)
 - ~ 100% Experienced parental deployment
- Analyses: Atlas.ti software; team approach

Study 2: Impact of Multiple Deployment

- Focus groups conducted with National Guard and Reserve Teens at OMK camps summer 2008
 - Florida; Ohio, Maine, North Carolina
 - 11 focus groups
 - Participants:
 - 85 adolescents between ages of 11 and 18
 - ~ 73% Caucasian; 11% African-American
 - ~ 51% Females
 - ~ 48% Active Duty military parent (26% Army)
 - ~ 46% National Guard or Reserve military parent (23% Guard)
 - ~ 79% Experienced parental deployment (24% multiple)

Double ABC-X Model of Adjustment (McCubbin & Patterson, 1983)

Normative Development

- Brain development—frontal lobe still under construction
- Ability to take others' perspective
- Ability to monitor own reactions/presentation of self

Stressors: Deployment & Redeployment

“When he came home from, like, his training or whatever when he was supposed to leave, but he had been gone for like a month, but it was still like you know were excited to see him or whatever. It almost felt like you didn't, like, connect again, like, he was home like physically, but he wasn't because you didn't want to get like re, like, attached to him again. So, like, there was a lot of stuff like, oh, this happened, you had so much to tell him, but like it was like you didn't want to get so attached again that it was emotional, like, leaving again...”(17-year-old White female, National Guard)

“...I think like he's in the Retired Reserves, but I think he's going to go back. Like they're going to say, ‘Oh, yeah, just before you retire, oh yeah, you're going to go back.’”(12-year-old White female, Reserves)

Indicators of Adjustment

Mental Health

Increased Conflict

Behaviors & Coping Strategies

Comparison of High and Low Adapters

Changes in Mental Health

- Depression & Anxiety

“I can’t go to sleep. Because they are up and doing something and you can’t like, you’re thinking about what they are doing.”

“The worst time is when the phone rings because you don’t know who is calling. They could be calling, telling you that he got shot or something.”

“I could tell my mom was getting like really depressed and since she wouldn’t talk, I wouldn’t talk. And so everyone around the house was just kind of depressed for a little while...”

Increased Conflict

- Greater intensity in overall family emotion
 - “I was angry at everybody...”*
 - “I felt enraged. Just means he got taken away from me—they took my dad away from me.”*
 - “[It’s hard] not having a dad to depend on for like two years, and now my mom is always upset when we talk about him.”*
- “Lashing Out” response
 - “Sometimes I—like, not because I mean to or anything—but I get snappy, sometimes because the stress just leaps onto other people.”*

Relationship Conflict

- Noticed Changes in Relationship with Mom

My mom acts different when my dad's gone. It's like she's not her normal self. She's kind of like stressed out and her 'stressed out' effects me too."

"It's just a lot more stress on her. Like she hold her stress up pretty well, but she's just like, if me and my sister are acting up, she gets mad a lot easier."

"When my dad was gone—the entire time he was gone—my mom, she just didn't try hard."

- Reintegration of Returning Parent

"Well when my dad left, everything's going one way, and when he comes back he's starting out right where he left off so...there's just a big clash and that starts lots of problems...Like he forgets that he's been gone for like a year... So he thinks we're a lot younger and while he was gone we matured a lot over the year. And he's still trying to treat us the way we were treated a year ago."

Coping Strategies

“I know this is weird to say this, but it was like he was dead.”(14-year-old White female, National Guard)

“...I really don't like show my feelings, I just hide it, let other people see, hey, if he's not afraid that his dad is going to get hurt because he knows his dad is strong then why should I be afraid?”(11-year-old African-American male, Marines)

“Well, I try. Every time they do the web cam I try not to be around or nothing because I don't really want to see him like that.”(13-year-old African-American female, Army)

Findings: High Adaptation vs. Low

- Higher Adapters:
 - Understood that change and adaptation were necessary.
 - Place their situation in context.
 - Were less likely to internalize stress, handled stress more productively.
 - Were involved in less interpersonal conflict with family.

Quotes from High Adapters

- *Because I look at how other people are living, like some people, both of their parents died, and they're homeless. And I look at my Dad, and at least I know he is still alive."*
- *"Well he is deployed but we try doing a lot of stuff to help out while he's gone, and I go to my friend's house a lot."*
- *"Because there are some, a whole bunch of bad things but there's more good things than bad things happening to me."*
- *"And some of the good things help out, too, like I have really good neighbors that understand the situation going on. And I'm always welcome at my neighbors."*

Findings: High Adaptation vs. Low

- Lower Adapters:
 - Expressed more emotional responses to deployment.
 - Made greater expressions of violence and aggression.
 - Discussed greater levels of conflict with non-deployed parent, usually Mothers
 - Were less likely to feel their friends understand the situation.

Quotes from Low Adapters

“When my Dad is there we do lots more stuff than when he’s gone. It’s kind of hard to adjust to things without him when he’s gone.”

“And my Mom is like always stressed out which, you know, is because she has to deal with all of us and like me, she’s kind of mad at, she can’t have like time or calm down or anything.”

“It’s just school and all kinds of people just don’t really care, and they treat you different.”

Findings: Both High and Low Adapters

- Reported grades suffering as result of deployment worries.
- Reported inappropriate disclosures by adults on war particulars.
- Reported being very distracted by deployment-related worry.

Summary: High v. Low Adaptation

Differences between the high and low adapters
seem to be related to “B” and “C” factors—
Resources and Meaning Making.

Resources

Formal and Informal Supports
Attachment

Formal and Informal Support Networks

- Informal Supports
 - Sources: parents, grandparents, friends both with and without military ties
 - Helpfulness: Provide a chance to release tension or by diverting their attention from a situation over which they had no control
 - Drawbacks: Not always helpful. Sometimes felt inauthentic or voyeuristic
- Formal Supports
 - Sources: youth centers, church youth groups 4-H, school
 - Helpfulness: mixed reviews; wanted those who really understood what they were going through

Informal Support Quotes

“And I sort of feel like my best friends and their families become part of my family, and we treat each other like extended family.”

“I’ve got one friend that will actually talk about it because she has a brother being deployed soon. But all the rest of my friends don’t, it sort of makes them uncomfortable for me to talk about it, and that makes me uncomfortable too.”

“I won’t talk to my family about it because they just make it worse.”

Formal Supports Quotes

- *“I really do not like that stuff [formal supports]. I like dealing with it myself. But for other people that do like need the support I think it would be a lot better if it was someone who actually went through it and is like not their age but around there somewhere so they could relate to them more. Because I tried that before, tried to do the one-on-one thing, and it was some old dude that pretended he knew how I felt but I knew he didn’t. So it really frustrated me that he thought he could do anything.”*
- *“I feel like my teachers are more understanding and you know, more apt to give me an extension on my homework because they know about my family. Because I had this one teacher whose dad was deployed and he died while he was over there. And you know, she just took me under her wing and was like my counselor throughout the rest of the year.”*

Examples of poor informal support

“Everyday at school someone would always say, ‘oh, your dad's not doing anything over there. He's just sitting around killing innocent people,” and almost everyday I'd get in a fistfight, and it just kind of hit me hard. . . During the deployment. . . I always used to be able to walk into the school with a strong head knowing that my dad is doing the right thing, that he is fighting for my freedom and that he will defend me at any cost.” (15-year-old White male, Army)

“My friends don't support me in anything. They don't believe me. Like, I tried telling them when my mom left. And they were like, ‘No, you're just saying that for attention.’“ (13-year-old White female, parents in multiple branches of military)

Attachment as a Resource

“I usually feel a lot closer to my mom because I know that if something like happens, like, a snake was in the backyard or something and it's like more than three foot, I'm not going to be able to take it, because it will be able to strike me even from six feet away from it, it'll still be able to strike me. I know my mom will know what to do and how to handle it.”(11-year-old African-American male, Marines)

“Like with my mom like I guess she kind of had a mental breakdown completely. So I guess I was more of a mom there, like having dinner and stuff . . . She just didn't do anything . . . I didn't talk to her much. I talked to my older brothers a lot though.”(14-year-old White female, National Guard)

“My mom was in school so she really didn't have time for her kids like we really like, I can't speak for like my brothers and sisters, but from what they kind of showed, like, my mom grew distant from them. Like, she'd lock herself in her room at night and like for hours she wouldn't come out and just cry.”(16-year-old White female, Marines)

Meaning Making

Descriptions of:

Disclosure of Deployment

Changes in Roles and Responsibilities

Disclosure of Deployment

“I found out from our answering machine because a guy from my dad's office had called, and my parents had been acting strange so I just listened to the messages, and I found out and kind of blocked them off for a couple of days.” (14-year-old Bi-racial female, Army)

“My dad when he was going to leave for Iraq, he had, he told my mom first and then one night they decided to tell us, so they had a group meeting . . . We went to our family room, and they just talked about it. He knew when he was leaving. He told us when he was leaving. . . Like a couple of days before he left we threw a party for him for when he was leaving. It was kind of sad, but then . . . It was actually kind of cool. He left for the first six months to go train in D.C. and like pretty much all over, and when he was in D.C. and then Florida, we drove down there to see him. . . One time we just stayed for a month with him while he was training.” (12-year-old White female, parents in multiple branches of military)

“Yeah. But he pretty much just told us, and we spent time together, but we kind of kept our distance because we didn't want to like, you know, hold on too much. I mean, like, it was kind of like hope for the best, but expect the worst, you know, but we're a really close family.” (16-year-old White female, Marines)

Meaning Associated with Deployment

“When my dad was deployed I felt the same as I always do. Once you...if you’re born into the military, you get used to it.”

“I just didn’t know how long they would be gone and when they would come back, because plans change a lot. And we just didn’t know like how long we would have to go without our parent.”

“I wouldn’t say I felt mad, but it’s kind of confusing about why he would want to go and put himself in that position.”

“I didn’t think anything at first. I just kind of blew it off and didn’t really know it was going to be that long. And then when it started happening, started sinking in, it was hard.”

Changes in Roles & Responsibilities

- Before & During:

“...my brother was too young. He was just about...one, around that age, and so my dad really all he said was ‘I’m leaving it up to you, you need to take care of them, take care of your mother and your brother.’ Which kind of... I know he had that respect, but I didn’t know he would ever drop it on me, which kind of gave me that good, but bad feeling like yippee, oh, crap.” (15-year-old White male, Army)

- Reintegration

- *“...and it was a lot harder for us...to get into the routine of having him than it was for him to leave...Because there were responsibilities taken up by each of us and then when dad came home, we didn’t have the responsibilities anymore but we were used to them and so that caused a change also. And so it’s just like, ‘Okay, what do we do now?’ We can’t go back to being who we were because we’re not that anymore. We have to move forward, but it’s also something you have to do as a family.”*

Implications for Support

Parents

Adolescents

Implications for Parents

- Help parents understand that *accepting deployment* as a part of military life can help the family cope.
- Educate parents on *indicators of adolescent adjustment*. A change in an adolescent's grades can be an indicator of difficulty adjusting to deployment.
- Help parents understand that adolescents perceive the *absence of a parent as difficult* whether it comes in the form of a training, mobilization or deployment.
- Educate parents on appropriate *strategies for coping* with deployment. Denial of the reality of deployment can be counterproductive. Talking about the deployment can help normalize the experience for all family members.

Implications for Parents

- Encourage parents to conduct periodic *family meetings* prior to and after the deployment to discuss changes in roles and responsibilities. This can be an important preparatory tool for all family members. Parents can take this opportunity to make sure everyone understands their contribution to the family.
- Educate parents on the importance of maintaining *consistent expectations and family patterns, activities, and rituals*. If changes to routines must be made, it is helpful to involve adolescents in the discussion.
- Educate parents on the benefits of accessing local neighborhood or community *support systems* (car pools, meal sharing, support groups) that can be activated immediately at a new residence. It is important that support follows the family wherever they go.
- Educate parents on the importance of *self care for themselves*. This can include regular exercise, time with friends and a healthy diet. Help them to remember that they are still setting the example for how to coping to their children.

Implications for Adolescents

- Before the deployment, encourage parents to *prepare the adolescent* for the parent's absence by talking about the situation and what everyone can do to cope. Upon return from deployment, encourage *discussions with the deployed parent* about how adolescents have changed and what new responsibilities they have undertaken.
- Educate adolescents on *normative responses* to having a parent deployed, such as worry and poor concentration. Encourage youth to acknowledge the issue and to seek support as needed--especially as it related to school work.
- Normalize for adolescents the fact that *conflicts may arise* as a result of a parent's absence. Encourage them to participate in family meetings to address how everyone is feeling.
- Encourage adolescents to *maintain positive friendships and support outside* of the family. These can include social networks in school, community, or other organizational settings, especially relationships with other adolescents with deployed parents.
